

# Sinus Graft (Lateral Wall)

**Background:** LL wanted to replace his missing upper left chewing teeth. Like most people, LL did not have sufficient bone height for implants. As a result, he had to have bone grafting done first. Then at a later date, two implants were stabilized to hold two crowns.

Pre-op visit

Implants with Sinus Graft

**Testimonial:** *“It was not very painful afterwards, just uncomfortable- I really had no problem with it. The swelling was minimal and any bruising was gone within the week. I’m glad I got this done so that I can have my implants. I knew this was necessary to get the right end result!” S.L.- Berlin, NJ*
