

Sinus Graft (Lateral Wall)

Background: BB was interested in replacing her upper left 2 main chewing teeth. Like most people, she did not have enough bone height to replace these teeth. Due to sinus, she required sinus bone grafting to give her enough bone to stabilize both implants. BB was fortunate to have both implants placed the same day as the sinus bone augmentation

Pre-op visit

Implants with Sinus Graft

Testimonial: "People worry about pain. For me, there was none. The whole process required fewer visits than I thought. Because my teeth were missing so long, I needed the sinus graft to make my implants successful. The end result- I feel like I have my own teeth back & that's really true!"
